

ILYA POLYAEV

GAMES DEVELOPER & PROGRAMMER

ABOUT ME

I am a new up-and-coming games programmer specialising in the C++ language as well as many engines such as Unreal, Unity and Godot. I enjoy making indie games that focus on interesting and unique gameplay mechanics that define the game more within its respective market. I've been programming for over 5 years now and have participated in many game jams to improve my abilities further. I am currently studying Games Development at Norwich University of the Arts, England (Currently in Year 2 of 4).

PROJECTS

PYRO ENGINE

Jan 2024 - Present

A Specialised 2D game engine that I am currently working on. The engine uses OpenGL as its rendering API and the platforms that will be supported upon release will be Windows & Linux. I intend in the future to use this engine to make a 2D marketed game but the current plan for it is to stay open source so that anybody can use it. This project has been (and is still proving to be) very useful in building up my mathematics skills that are transferable within this industry.

BITMAP BYGONES

Dec 2024

An adventure game about finding ancient artifacts within existing art pieces! Search through three retro environments within paintings mario-64 style to find three exhibits for the museum. This was submitted for Vertical Game Jam 2024 as part of a group project. Doing this really helped with my team building as well as team communication and coordination skills.

EXPERIENCE

I never worked before (due to my only time window of work experience being when the COVID pandemic was around) but I am willing to try and be trained if need be. I believe that even though I don't have experience, I am more than qualified as I have an innate passion for this sector of industry.
